

“README” Document

“Loyalty-Competence Tradeoffs for Top U.S. Federal Bureaucratic Leaders in the Administrative Presidency Era”

(September 2019, *Presidential Studies Quarterly*)

George A. Krause & Anne Joseph O’Connell

The various replication file materials for this article are under the master folder title of “*Loyalty-Competence Tradeoffs for Top U.S. Federal Bureaucratic Leaders in the Administrative Presidency Era File Replication Materials*”. This folder contains this “README” document, plus two separate subfolders that cover the data & statistical analysis covered in both the article manuscript and Supporting Information (SI) documents (“*Manuscript & SI Document Replication File Materials*”), and also the data * statistical analysis covered in the construction of the agent latent trait estimated measures discussed in the Measurement Model Appendix (MMA) document (“*Measurement Model Appendix Replication File Materials*”). Please note that some of these materials already appear in public domain through the *American Journal of Political Science* Harvard Dataverse:

(<https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/E9U00S>)

I. Preliminary Files

- **READ-ME File. Loyalty-Competence Tradeoffs 2019.** This document provides some background on the various files included in these data replication materials. (“*Loyalty-Competence Tradeoffs.PSQ.README.12-20-2018.docx*”)
- **Loyalty-Competence Tradeoffs 2019 PSQ Codebook.** Contains the requisite data Data/variable codebook for the core Stata database file (“*Loyalty-Competence Tradeoffs.Data Codebook.PSQ Article.12-20-2018.pdf*”).
- **“Appointments” 2016 AJPS Codebook.** Data/variable codebook for the core Stata database file (“*Appointments.AJPS.Manuscript & SI Documents.Stata Variable Codebook.05-30-2015.pdf*”). Especially helpful for additional variable definition content.

II. Manuscript Folder

- **Individual-Level Appointee Loyalty-Competence Tradeoff Stata Database.** This is the main database used to conduct statistical analysis appearing in the article. (“*Measurement Database.Bayesian GLTA MODEL 23FBIT.05-30-2015.manifest indicator variables added.03-20-2016.10-20-2017.holdovers var added.V2.dta*”)

- *Stata Program (*.do) & Output (*.smcl) Files for Statistical Analysis Appearing in both Table 1 and Figure 1.*
 - *Loyalty-Competence Tradeoffs.TABLE 1 & FIGURE 1 STATISTICS.09-23-2018.do*
 - *Loyalty-Competence Tradeoffs.TABLE 1 & FIGURE 1 STATISTICS.09-23-2018.smcl*
- **Grouped Mean Loyalty-Competence Tradeoff Database.** This database is used to construct Figures 1A-1D appearing in the article.
 - *Stata Graphics Files for Figure 1 (Figures 1A-1D)*
 - *FIGURE 1A.Organizational Position.09-12-2018.gph*
 - *FIGURE 1B.Agency Design.09-12-2018.gph*
 - *FIGURE 1C.President-Agency Ideological Configuration.09-12-2018.gph*
 - *FIGURE 1D.President-Senate Partisan Control.12-19-2018.gph*

III. Supporting Information Folder

- **Bonica Matched Comparison Analysis**
 - **Stata Database** (“*Measurement Database.Bayesian GLTA MODEL 23FBIT.05-30-2015.Bonica Comparison Database.03-21-2016.STATISTICAL ANALYSIS.FINAL.dta*”)
 - **Stata Program File** (“*Statistical Analysis of Comparing Bonica Matched Observations.03-22-2016.TABLE 3.Measurement Manuscript.do*”)
 - **Stata Output File** (“*STATISTICAL ANALYSIS OF COMPARING BONICA MATCHED OBSERVATIONS.03-22-2016.Table 3.Measurement Manuscript.smcl*”)

III.A MEASUREMENT MODEL APPENDIX REPLICATION FILE MATERIALS

Data Files: Containing three data files: (1) the core database used for all of the Mplus analysis (NOTE: requires “*apptbiodata.01-03-2015.csv*” comma delimited format); (2) an EXCEL spreadsheet (“*GLTA Measurement Model.Validity & Reliability Statistics.01-04-2015.REVISED VERSION.xlsx*”) containing the computation of the model diagnostics for the alternative measurement models estimated and appearing in the *Measurement Model Appendix (MMA)* document; and (3) a Stata (“*alternative latent trait estimates.correlation analysis.01-05-2015.dta*”) data file containing Bayesian Posterior summary statistic estimates from alternative measurement models estimated and appearing in the *Measurement Model Appendix (MMA)* document.

Data/Variable Codebook: Data/variable codebook for the core Mplus database file (“*Appointments.AJPS.MMA.Variable Codebook for Mplus.06-01-2015.pdf*”); (2) document describing the computation of the model diagnostic statistics (“*Appointments.AJPS.MMA.Computation of Model Diagnostic Statistics for Measurement Models.06-01-2015.pdf*”) covered in the EXCEL spreadsheet (“*GLTA Measurement Model.Validity & Reliability Statistics.01-04-2015.REVISED VERSION.xlsx*”) and also covered in the *Measurement Model Appendix (MMA)* document; and (3) a comparison of the Bayesian posterior summary statistics across different measurement model specifications covered in the *Measurement Model Appendix (MMA)* document (“*Appointments.AJPS.MMA.Correlation Analysis of Alternative Latent Trait Estimates.06-02-2015.pdf*”).

III.A.1 Mplus Program Files Subfolder: Containing the requisite Mplus statistical program code from the analysis conducted in the *Measurement Model Appendix (MMA)*. There are 6 separate Mplus statistical output “*.inp” files (“22”, “23” [REPORTED], “24”, “33”, “43”, & “mlr 23”) each titled corresponding to the model specification, estimation procedure, or type of measurement analysis – and to the Mplus output (“*.out”) files contained in its own subfolder (SEE BELOW).

III.A.2 Mplus Output Files Subfolder: Containing the requisite Mplus statistical output from the analysis conducted in the *Measurement Model Appendix (MMA)*. There are 6 separate Mplus statistical output “*.out” files (“22”, “23” [REPORTED], “24”, “33”, “43”, & “mlr 23”), each titled corresponding to the model specification, estimation procedure, or type of measurement analysis.

III.A.3 Mplus Bayesian Posterior Summary Statistics Files Subfolder: Containing 5 sets of summary statistic files based on the Bayesian posterior estimates (2 files per set: one in “*.dat” Mplus format without labels for agent latent trait estimates and corresponding ones saved in “*.xlsx” EXCEL format containing variable labels for agent latent trait estimates used in this study). These constitute the Bayesian Posterior summary statistics for the various measurement model specifications (“22”, “23” [REPORTED], “24”, “33”, “43”) discussed in the *Measurement Model Appendix (MMA)*.
